## TECHNICAL REQUIREMENTS

Rehearsal VRP is a web-based role-playing application. It works natively in the web browser of mobile devices, and on the desktop uses a Flash-based recording plugin to stream video from webcams to servers that are designed to save and transcode the media in real time. The video stream is transferred using a protocol known as RTMP, which was originally developed by Macromedia (Adobe). This protocol runs over port 1935, but is capable of tunneling through standard web traffic if port 1935 is not available.

### DESKTOP REQUIREMENTS

- Operating System:** Windows XP (or newer) or OS X 10.6 (or newer)
- Browser:** IE8 (or newer), Chrome (latest), Firefox (latest), Safari (latest)
- Plugins:** Flash 11.1 (or newer)
- Hardware:** Webcam (internal or external), Speakers or Headphones

### MOBILE REQUIREMENTS

iOS 6 (or newer), Android 4 (or newer)

### NETWORK REQUIREMENTS

- Speed:** DSL (or better), 3G (or better)
- Required Protocols:** HTTPS over port 443 to \*.videoroleplay.com
- Preferred Protocols:** RTMP over port 1935
